

HARDWOOD

BOATWOOD

Recycled wood from old boats. Usually conifers. The material is cleaned and free of harmful substances. There may be cracks, nail holes, color differences and irregularities in the wood. It is part of the collection's character and makes each individual piece of furniture unique. New cracks can occur. The furniture is only treated with a thin stain and lacks surface protection. Recommended for indoor use.

Wipe gently with a slightly damp cloth. Vacuum cleaner with soft furniture nozzle is suitable for the natural cracks. Treat with natural wood wax. Spray wax is also good to use. If left untreated, the furniture becomes more fragile and stains can become permanent, even if they are wiped off immediately.

JAVA OAK

A tropical fast-growing wood species that has a surface that is similar to teak but with a softer structure. The surface is treated with a water-based, environmentally friendly, color varnish. Recommended for indoor use. Use a slightly damp cloth when cleaning.

MAHOGANY

Mahogany is an easy-to-work and water-resistant type of wood that is excellent for furniture production. We only use wood from plantations in Indonesia when we manufacture our products. The surface is treated with coloring varnish. Use a slightly damp cloth when cleaning.

ACACIA

During production, the furniture is treated with oil and it is required that you continue to oil the furniture in order for it to stay in good condition. If the furniture is placed outdoors, oiling is required several times a year.

Make sure that the furniture is dry and clean before oiling. Continue to oil until the surface is saturated and the furniture does not absorb more of the oil. Wipe off excess oil with a cloth. Remember to protect the surface before and after treatment.

We recommend "Furniture Oil" from "Leathermaster Scandinavia". Read the operating instructions carefully before use.

TEAK, ART TEAK

Teak is a type of wood with particularly good properties for the manufacture of furniture and furnishings. It is hard, heavy, elastic and contains oil, which makes it very resistant to moisture and impact. We only use wood from plantations in Indonesia when we manufacture our teak products.

In the manufacture of our recycled teak products, branches and roots from teak trees are used. There may be small cracks, nail holes, colour differences and irregularities in the wood. It is part of the collection's character and makes each individual piece of furniture unique. Recommended for indoor use.

Wipe gently with a slightly damp cloth. Vacuum cleaner with soft furniture nozzle is suitable for the natural cracks.

ASHWOOD

Ashwood is a very hard and strong wood, that is still easy to work with. The ash wood has a prominent grain and gives a lively impression.

Recommended for indoor use. Use a slightly damp cloth when cleaning.
