

# ELMWOOD

Recycled elm wood from Central Asia. Elm is a very strong furniture wood that ages beautifully. Characteristic of our products is an unprocessed appearance and an unpolished surface with irregularities in the wood. The products are treated several times with wax during manufacture. There may be small cracks, nail holes, color differences and irregularities in the wood. It is part of the collection's character and makes each individual piece of furniture unique. Small cracks can occur. Recommended for indoor use.

## MAINTENANCE

Wipe gently with a slightly damp cloth. Vacuum cleaner with soft furniture nozzle is suitable for the natural cracks. Treat with natural wood wax or with pigmented wax if you want a darker shade on the furniture. Spray wax is also good to use. If left untreated, the furniture becomes more fragile and stains can become permanent, even if they are wiped off immediately.
