

## QUIET FABRIC

The chenille yarn in the fabric gives Quiet an extra soft, voluminous, and luxurious feeling. Note that during daily use a woolly / hairy effect can occur. It is a result of the furniture being used and not a sign of low quality.

Pilling is more common in winter when our indoor climate is drier. Too low humidity creates static charge, especially on synthetic fabrics, and the furniture will more easily attract hair, dust, or other types of fibres.

Composition: 90% pes, 10% pac. Dry clean.

### MAINTENANCE

The excess fibres are easily removed with a pilling machine. If you do not do this, pilling can appear.

The pilling itself usually come from another source, such as wool clothes, decorative textiles, dust or pets. To avoid this, it is recommended to vacuum the furniture about once a week with a soft furniture nozzle and with low power.
