

NATURAL WASHED

All our leather furniture is made from leather of the highest quality, so called full grain from Italy and South America. The products are treated in different ways to get the desired look. The furniture is made with metal or wooden frames. The spring system usually consists of elastic bands or so called nozag springs. Seats and backs are made with filling of foam, polyether or certified down and feather. Recommended for indoor use. Natural washed are leather completely without topcoat, so-called full aniline, which makes them very soft and flexible. This also makes the leather more sensitive to stains. The look is deep and natural and there may be colour changes. The animal's own structure, insect bites and scars are left visible.

MAINTENANCE

In order for the leather to retain colour and function, it is important to take care of it. Vacuum the furniture with a soft brush. Stains should be wiped off immediately before being absorbed into the leather. Never use strong detergents but use a soft cloth with lukewarm water or a leather cleaner. On small scratches and abrasions, you can try to rub with a clean finger. Never expose the leather to strong sunlight and do not place the furniture near a heat source.

To maintain the shape and appearance of this furniture, it is necessary to regularly puff up and shake the cushions lightly to distribute the filling in the cushion. On some models you can pick out the inner cushion and turn it over. Seats and cushions filled with down require a little more maintenance than synthetic cushions, but if you take care of them, they will look good and be comfortable for many years.

Unlike other leathers, this type of leather should not be treated with leather cream. If you do that, it loses its typical character. Therefore, you should instead impregnate these leathers with Leathermasters Natural Protection.
