

CARPETS

Thank you for choosing a rug from Artwood!

When you unpack your rug, it may shed some loose threads. These are a result of the cut and can easily be removed by vacuuming. Some carpets can also shed excess fibers at the beginning and require extra vacuuming when the rug is new.

MAINTENANCE

Vacuum your rug regularly and keep the brush on the nozzle up, as the brush wears on the rug and the edging.

Feel free to hang your rug out for airing a couple of times a year. You should avoid shaking or whipping your rug. Brush instead with a soft brush. Make sure that the floor on which the rug is placed is dry.

Avoid folding the rug as the backing can break, instead roll up your rug.

A textile rug is made of material that moves depending on humidity and temperature. It can thus grow and shrink with the seasons.

We reserve the right for measurements to vary +-1%
