

# UPHOLSTERED FURNITURE

All our upholstered furniture is made with metal or wooden frames. The spring system usually consists of elastic bands or so called nozag springs. Seats and backs are made with filling of foam, polyether or certified down and feather. Our upholstery fabrics have a Martindale of at least 20,000. Most are between 5 and 6 on the lightfastness scale, which makes them suitable for indoor use.

## MAINTENANCE

Keep in mind that furniture that is placed in direct sunlight, risks fading or changing color. Turn cushions regularly. On some models you can pick out the inner cushion and turn it.

Seats and cushions filled with down and feathers, require a little more maintenance than synthetic cushions, but if you take care of them, they will look good and be comfortable for many years. To maintain the shape and appearance of this furniture, it is necessary to regularly puff up and shake the cushions lightly to distribute the down and the feathers in the cushion.

Vacuum the furniture regularly with a soft furniture nozzle. Dust and fibers from other textiles such as rugs and decorative pillows can cause pimples on the furniture. Hair from pets, for example, should also be removed regularly to avoid pimples.

Recommended for indoor use.

In order for the furniture to stay nice for a long time and make it more resistant to stains and dirt, it is important to treat the furniture with a textile impregnation.

Unless otherwise stated on the covers, dry cleaning of all textiles is recommended.
